

# Attack on America: Fallout on the U.S. Economy

# by Mark M. Zandi Chief Economist Economy.com

This special report analyzes the impact of the September 11, 2001 attack on the U.S. economy and financial markets. It updates our August 2001 U.S. macro, financial, and state forecasts to account for the impact on the U.S. economy of the September 11 attack. This special report includes analysis by Economy.com Chief Economist Mark Zandi and forecast tables for all major U.S. macro variables and state ranking table for employment, gross state product, and the unemployment rate.

# **About Economy.com**<sup>™</sup>

Economy.com, Inc. is a leading independent provider of economic, financial, and industry research designed to meet the diverse planning and information needs of business organizations, governments, and professional investors worldwide. Our economic research has many dimensions: country analysis; financial markets; industrial markets; and regional markets, including states, metropolitan areas, and counties. We operate the largest network of economics related web sites and databases on the Internet, including The Dismal Scientist (www.dismal.com) and Free Lunch (www.freelunch.com).

Economy.com's information and services are used in a variety of ways, including strategic planning; product and sales forecasting; risk and sensitivity management; and as investment research.

We have over 400 clients, including the largest commercial and investment banks; insurance companies; financial services firms; mutual funds; federal, state, and provincial governments and agencies; utilities; and industrial and technology clients. Representative clients include Fidelity Investments, Fannie Mae, Citigroup, the Commonwealth of Pennsylvania, US Treasury, The New York Times, Moody's Investors Service, and Microsoft.

Economy.com, Inc. was founded in 1990 as Regional Financial Associates, Inc. ("RFA"). We are an employee-owned corporation, headquartered in West Chester, Pennsylvania, a suburb of Philadelphia.

# Attack on America: Fallout on the U.S. Economy

Mark M. Zandi

The reprehensible terrorist actions perpetrated on September 11, 2001 were an attack on this nation, both politically and economically. With the U.S. and global economies already reeling, the economic shock of these events has the potential to be debilitating. This analysis attempts to quantify the possible and most likely economic ramifications of these recent events.

**Immediate impact.** The initial economic impact of the terrorist attacks is decidedly negative. Estimates of the damage to buildings and physical infrastructure in Lower Manhattan are already topping \$20 billion. By any measure, the costs of this disaster are unprecedented. Hurricane Andrew, which hit Miami in the summer of 1992 and was previously the most costly disaster, resulted in just over \$16 billion in damage (see Table 1).

Economic activity has also been severely disrupted. The nation's civilian air system and financial markets were largely shut down during the week of the attack and are only now slowly being re-established. Job losses totaling in the tens of thousands are already being announced by the nation's major airlines, as they significantly scale back flights. The nation's communication system has also been impacted, as the World Trade Center was an important nexus in that system. The rest of the travel industry, from hotels to convention centers to restaurants, is also reeling. Unlike manufacturing activity, which if disrupted can be made up in future days and weeks, the economic activity being lost currently is lost forever.

Of course the economic disruption goes well beyond these industries. The entire economy came to a virtual standstill in the 24 hours after the attack, and even now the nation's baseball stadiums and shopping malls remain eerily quiet.

The economy of Lower Manhattan, arguably the most productive few square miles anywhere in the nation, has also come to a stop. The average person working on Manhattan creates annual economic output of an estimated \$150,000. This is more than twice the national average of \$70,000. New York city in total has annual gross product of over \$500 billion, equal to approximately 5% of total national economic output.

The economic output lost as a result of the attack is expected to amount to some \$25 billion in September alone. The air passenger and freight industry will take the most significant hit, losing almost \$5 billion during the month, followed by the hotel and securities industry (see Chart 1).

An estimated one full percentage point will thus be shaved from third quarter growth. Real GDP growth, which had been expected to expand by an annualized 0.8% in the third quarter, is now expected to decline by 0.2% (see Table 2). This will be the first decline in the nation's GDP since the first quarter of 1993.

**Year's end, early next.** The economic impact of the attack later this year and early next is much less certain and depends on numerous factors.

Of paramount importance is whether there are any further terrorist attacks, and the nature of the forthcoming U.S. military response. Clearly, the quicker and more effective any political and military action, the more likely the nation's transportation and financial systems will get up and running quickly, a sense of personal safety will be re-established, and travel and commerce will be re-ignited. The economic damage will be limited.

### Table 1: The Economics of Disasters Bils \$

			Eco	nomic Loss		Econor	mic Aid		Economic Aid
Disaster	Impacted Region	Date	Destruction	Lost Output	Total Loss	Insurance Gover	nment Aid	Total Aid	as a Share of Economic Loss
Attack on America	Entire Nation	September 2001	20.0	40.0	60.0	15.0	40.0	55.0	91.7
Los Angeles Quake	Los Angeles	January 1994	15.1	9.4	24.5	2.5	11.6	14.1	57.6
Midwest Floods	MN to MO	Summer 1993	4.5	7.0	11.5	1.0	5.2	6.2	53.9
Hurricane Andrew	Miami, FL	August 1992	16.6	8.4	25.0	10.5	7.8	18.3	73.2
Loma Prieta Quake	Bay Area, CA	October 1989	6.8	3.5	10.3	1.0	4.9	5.9	57.3
Hurricane Hugo	Charleston, SC	September 1989	6.3	3.0	9.3	2.7	2.0	4.7	50.5

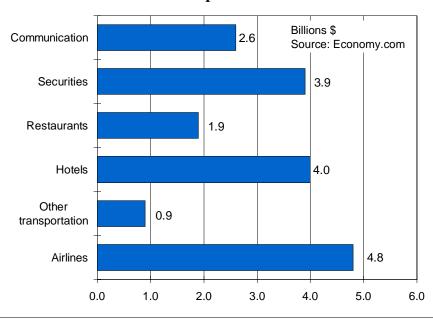

#### Notes:

Lost output associated with the Midwest floods includes \$5 billion in crop losses

The Bay Area includes the metro areas of San Francisco, Oakland, San Jose and Santa Cruz

The longer it takes to respond and resolve events to the population's general satisfaction, however, the more significant the economic disruption to travel and commerce. A bunker mentality could quickly develop among households, businesses and investors, exacerbating the economic damage. There is a historical precedent for confidence to erode under the weight of such events. In the immediate aftermath of the Iraqi invasion of Kuwait in the summer of 1990, oil prices surged, global equity markets slid, and consumer and business confidence caved (see Chart 2). We were all literally and figuratively glued to our TVs during the Gulf War, causing spending and investing to stall. That conflict was thus the proximate cause for the 1990-1991 recession.

The severity of the economic fallout from the terrorist attack will also be determined by the extent and timing of economic aid from insurance payouts, government aid, and financial contributions from various private institutions and individuals. On this score, the immediate response by the Bush administration and Congress has been very positive, with some \$40 billion in aid being appropriated so far to help pay for the cleanup efforts, rebuild infrastructure and beef up security. Congress is also preparing to provide financial aid to the commercial airline industry amounting to at least several billion dollars.

### Chart 1: Estimated Lost Output Due to Terrorist Attack

Source: Economy.com

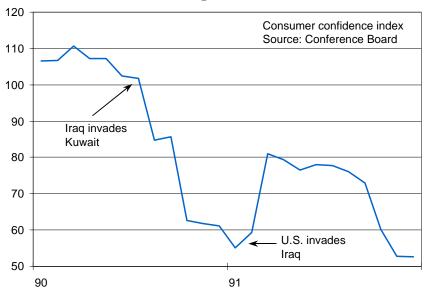

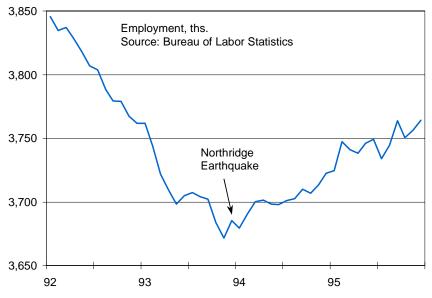

Chart 2: Persian Gulf War Upends Confidence

In the wake of previous costly natural disasters, financial aid from insurance payouts and government spending covered between one-half and three-quarters of the total economic cost of the disaster (see Table 1). In every case, the aid was a significant economic stimulus. The Los Angeles economy, for example, was jogged out of a four-year long recession by the rebuilding efforts in the aftermath of the January 1994 Northridge earthquake (see Chart 3). That quake caused an estimated \$15 billion in damage and an additional \$10 billion in lost economic output. Given the affront to all Americans from the terrorist attack, there will likely be significant momentum for the forthcoming aid to fully cover the economic cost of the disaster. The resulting economic stimulus will thus be substantial.

The economic damage from the terrorist attack will also depend on the response of the Federal Reserve Board and other central banks. The Federal Reserve Board has already acted forcefully to last week's terrorist attack by slashing the federal funds rate target by 50 basis points to 3%. Coming just before the re-opening of U.S. stock markets, the action is an effort to head-off the worst of any financial fallout from the attack.

Given sliding financial markets in Asia and Europe, the weakening U.S. dollar, and rising gold and oil prices, policymakers have good reason to fear a broad-based sell off in

the U.S. stock market. Even with the Federal Reserve's actions, the potential for investors to sell U.S. stock in coming days and weeks remains high. A number of key U.S. industries, including the airline, travel and financial services industries are under severe stress, and the stocks of companies in these industries are sure to come under selling pressure.

The Federal Reserve was working hard even before this morning's action to shore up the global financial markets. They added a whopping \$100 billion in liquidity to the financial system late last week to meet the liquidity needs of hard-pressed financial institutions. It also set up facilities with various central banks including the European Central Bank to borrow dollars to provide financial resources to European financial institutions with dollar needs. This suggests that there is a significant amount of cooperation among global central bankers and that interest rate cuts are forthcoming across the globe.

Even more monetary easing is likely in coming weeks. Just how much depends on conditions in global financial markets. A funds rate target of 2.5% by year's end now seems likely. Rates are also likely to remain lower for much longer into next year.

The Federal Reserve's success in limiting any economic fallout will be determined by its ability to support the faith of global investors in the safety of their U.S. stock and bond holdings. U.S. financial markets and the economy have been the beneficiaries of some \$500 billion in annual foreign capital in-flows. Global investors have been very willing to invest in the U.S., deeming it to be the global economy's Aaa credit. If anything were going wrong anywhere in the global economy, then money would flow more freely here. If this view is tarnished by the terrorist attack, then the heretofore-strong U.S. dollar would be at risk, as would global financial markets and the economy.

The economic scenario adopted by Economy.com as its most likely outlook is for policymakers to quickly succeed in their political and military response to the terrorist attack. More specifically, it is assumed that the bulk of the U.S. military response occurs before this Thanksgiving, and the response is sufficient to satisfy the general population that with more stringent safety precautions it is reasonably safe to travel about the nation and much of the rest of the world. It is thus assumed that the U.S. is *not* drawn into a protracted military action that requires the mobilization of a significant number of troops and other military resources. Under this assumption, terrorism will remain an ongoing global issue, but ultimately fade as the overriding issue of the day.

Under these assumptions, the disruptions to the nation's transportation and financial system will cost the economy an estimated additional \$15 billion in lost output in the last few months of this year and early next. Even if there are no further terrorist attacks in the U.S., the nation's transportation and communication systems will surely be disrupted again when the U.S. military does take action against the terrorists. The total cost of the terrorist attack, including the damage to property, will thus total an estimated \$60 billion.

Policymakers are also expected to remain aggressive in their efforts to provide financial aid and monetary support. The expected economic aid from insurance payouts, government aid, and private sources are expected to total an equivalent \$60 billion. The victims of the attack will eventually be made financially whole. The Federal Reserve is also expected to be more aggressive in lowering interest rates, reducing the federal funds rate target to 2.75% from its current 3.0% in coming weeks.

Under these admittedly relatively optimistic assumptions, the negative economic fallout later this year and early next from the terrorist attack will be measurable but limited. The U.S. economy is projected to post a gain of 1.4% in the fourth quarter of this year and growth of close to 2.5% during the first half of next year. While this is painfully slow growth, it is growth nonetheless (see Table 2). For the entire years of 2001 and 2002, real GDP growth is currently expected to be only marginally lower than previously projected (see Table 3).

Of course, a very different economic scenario will unfold if the U.S. military response is more prolonged and success remains elusive. Uncertainty and angst among consumers,

Economy.com

businesses and investors will continue to build and, as during the Persian Gulf War, the U.S. economy will likely slide into a full-blown recession that will prevail well into next year.

**Long-term.** Under almost any scenario for later this year and early next, the longerterm economic implications of the terrorist actions are disconcerting. At the very least, global outlays on the military and on maintaining personal and business safety will be more substantial in the years ahead. This spending does nothing to lift productivity gains and thus living standards. Indeed, the collapse of the Soviet Bloc in the mid and late 1980s and the subsequent decline in military outlays provided a substantial boost to the U.S. economy during the past decade. Perhaps the costs of combating global terrorism will be more evenly distributed across global economies than was the military spending associated with combating Communism, but perhaps not. The government surpluses that budgeters deemed so likely for years to come now appear very unlikely.

The terrorist acts may also undermine recent efforts to open the U.S. economy more fully to foreign immigration. An early agreement between the U.S. and Mexico to allow for more open immigration seems unlikely now. Stronger immigration to the U.S. will be necessary for the U.S. economy to continue to grow strongly and to support the large number of us who will become retirees and rely on Social Security and Medicare in the decades ahead.

The most significant casualty of the terrorist actions, however, will likely be to the personal privacy of all Americans. It may be necessary for the government to keep closer tabs on all of us to maintain the safety we will all demand. This may very well have serious deleterious implications for the free-flow of ideas and creativity so essential to the entrepreneurship and productivity of the U.S. economy.

**Conclusions.** The U.S. and global economies are significantly threatened by the terrorist attacks on the World Trade Center and Pentagon. Economies from Japan to Germany to the U.S. were already arguably in recession, and the economic disruptions resulting from the attacks could easily undermine the wobbly confidence that prevails and send the global economy into a protracted downturn.

While it may appear that there is no way to avoid a full-blown global economic recession, however, this is not necessarily so. With some deft policymaking and a bit of luck, the global economy could be relatively unscathed by recent events. U.S. policymakers are acting aggressively by appropriating money to aid the victims of the attack and providing liquidity to financial markets and institutions. Substantially more financial resources will be provided in the weeks and months ahead. Policymakers overseas also appear to be very supportive of U.S. actions and are cooperating and coordinating with U.S. policymakers.

The risks are high but the probabilities remain that the terrorist actions will *not* go down in history as the shock that induced the 2000-2001 recession. This would be at least a partial victory against the perpetrators of these dastardly acts.

**Monetary Policy.** The Federal Reserve Board has acted forcefully to last week's terrorist attack by slashing the federal funds rate target by 50 basis points to 3%. Coming just before the re-opening of U.S. stock markets, the action is an effort to head-off the worst of any financial fallout from the attack.

Given sliding financial markets in Asia and Europe, the weakening U.S. dollar, and rising gold and oil prices, policymakers have good reason to fear a broad-based selloff in the U.S. stock market. Even with the Federal Reserve's actions, the potential for investors to sell U.S. stock in coming days and weeks remains high. A number of key U.S. industries, including the airline, travel and financial services industries, are under severe stress, and the stocks of companies in these industries are sure to come under selling pressure.

The Federal Reserve was working hard even before this morning's action to shore up the global financial markets. They added a whopping \$100 billion in liquidity to the financial system late last week to meet the liquidity needs of hard-pressed financial institutions. It also set up facilities with various central banks, including the European Central Bank, to borrow dollars to provide financial resources to European financial institutions with dollar needs. This suggests that there is a significant amount of cooperation among global central bankers and that interest rate cuts are forthcoming across the globe.

Central bankers have significant latitude to ease monetary policy further given the terrorist action, an economy that was already close to, if not in, recession prior to the attack, and low and receding inflation. The initial economic impact of the terrorist attacks is decidedly negative. Estimates of the damage to buildings and physical infrastructure in Lower Manhattan are already topping \$20 billion. By any measure, the costs of this disaster are unprecedented. Hurricane Andrew, which hit Miami in the summer of 1992 and was previously the most costly disaster, resulted in an estimated just over \$16 billion in damage.

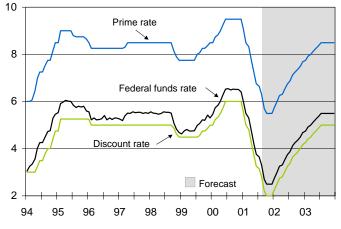

Economic activity has also been severely disrupted. The nation's civilian air system and financial markets were largely shut down during the week of the attack and are only now slowly being re-established. Job losses totaling in the tens of thousands are already being announced by the nation's major airlines, as they significantly scale back flights. The rest of the travel industry, from hotels to convention centers to restaurants, is also reeling. Of course the economic disruption goes well beyond these industries. The entire economy came to a virtual standstill in the 24 hours after the attack, and even now the nation's baseball stadiums and shopping malls remain eerily quiet.

An estimated full percentage point will thus be shaved from this quarter's growth. Real GDP growth, which had been expected to expand by an annualized 0.8% in the third quarter, is now expected to decline by 0.2%.

While the disruptions to the U.S. and global economy are expected to result temporarily in somewhat higher energy prices and a lower dollar, overall

inflation is expected to moderate further under the weight of substantially weaker global economic conditions. Core producer prices and nonenergy import prices are already falling, and core consumer price inflation appears set to decelerate. Inflation is not a factor in the Federal

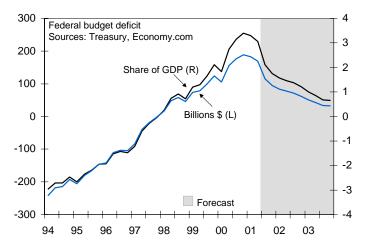

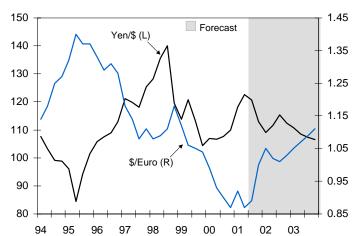

Reserve's current decision making. The federal funds rate target is expected to end this year at 2.5%.

**Fiscal Policy.** Any concern regarding the federal government's deteriorating fiscal situation has vanished, at least temporarily, in the wake of the terrorist attack. The surplus for fiscal year 2001 is still expected to come in close to \$150 billion, but the costs associated with responding to the terrorist attack and aiding its victims, and the impact of the weakening economy on revenues and outlays will significantly cut into the surplus for FY 2002.

The Bush administration and Congress have already appropriated some \$40 billion in aid to help pay for the cleanup efforts, rebuild infrastructure and beef up security. Congress is also preparing to provide financial aid to the commercial airline industry amounting to at least several billion dollars. Even more government aid will be forthcoming if the economic costs continue to rise. The victims of the attack will ultimately be made financially whole.

The initially weaker economy resulting from the attack will also cut into revenues and add to the costs of providing support to economically distressed households. Even prior to the mailing of tax rebate checks in July, revenue growth was stalling. Year-over-

year growth through July is now just over 3%. This compares to double-digit growth just a year ago, and is the weakest growth since in the wake of the 1990-91 recession.

The growth in government outlays is also already accelerating. Excluding interest payments on the national debt, year-over-year outlay growth is currently near 6%, the strongest it has been since the early 1990s.

The surplus for FY 2002 will likely come in close to only \$50 billion. Longerterm budget prospects are also dimming given the large tax cuts slated for coming years and the prospects for substantially more government spending, particularly for the military.

**U.S. Dollar.** The U.S. dollar is under growing pressure. The dollar is currently trading close to 92 cents to the dollar and

117 to the yen. Prior to the attack, the euro was worth less than 90 cents and the dollar was fetching more than 120 yen.

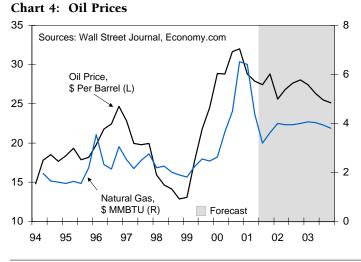

Chart 3: U.S. Dollar

Global investors are re-evaluating their views regarding the safety of their U.S. stock and bond holdings. U.S. financial markets and the economy have been the beneficiaries of some \$500 billion in annual foreign capital inflows. Global investors have been very willing to invest in the U.S., deeming it to be the global economy's AAA credit. If anything were going wrong anywhere in the global economy, then money would flow more freely here. This view has been tarnished by the terrorist attack, thus putting U.S. financial markets and the dollar at substantial risk.

The dollar is expected to end the year close to parity with the euro and near 110 yen.

**Energy Prices.** Energy prices remain high, and the potential for them to spike higher in coming weeks is very high. The price of West Texas Intermediate oil has risen from near \$25 per barrel prior to the terrorist attack to near \$30 per barrel currently. The growing concern in global energy markets is that while the oil producing areas of the Middle East do not appear at direct risk, there is a high degree of concern that the global energy supply chain will be disrupted by a likely U.S. military action in the region.

Despite these concerns, oil prices are assumed to be near a peak. This is based on the assumption that any U.S. military action will not significantly disrupt global energy supplies and that OPEC will respond to the higher oil prices by unofficially pumping more oil until price pressures abate.

## STRENGTHS

High per capita income and huge diverse economy support resiliency in the near term.

- Metro area remains financial capital of the nation, supporting rebuilding efforts.
- Federal disaster assistance is coming quickly.

#### WEAKNESSES

- High business costs will rise further due to security concerns.
- Congestion will only get worse in near term.
- Multiple city and state tax regulations.
- Long-term fiscal health questionable.

- Fed cuts rates more aggressively than expected.
- Insurers and government move with unprec-

### edented speed to fund rebuilding.

### DOWNSIDE

- Businesses hesitate to move back to NEY.
- Tourists shy away from NEY.
- Rebuilding costs hit local government fiscal conditions.
- Sapped national confidence drives stock market weaker than expected.

**Recent Performance.** The horrible events that have unfolded in New York City have brought its economy to a near standstill. Prior to the attack, NEY's economy was already slowing and employment was down from an April peak. The unemployment rate, however, continued to fall through July, illustrating some resilience in the economy prior to the attack.

New York City's businesses will slowly regain their footing, but its economy has sustained a major blow. The financial industry is crippled, transportation within and in and out of the city is still restricted and stores are largely empty. Like a hurricane or earthquake, this terrorist attack leaves the city with a reduction in output and extensive property damage that will pull down this vibrant economy in the near term.

**Impact.** There will be an immediate impact through lost output and lost tax revenues. Some of these losses can never be made up as a large share of business transactions that go on in New York City involve services rather than goods. Tax revenue losses are another impact, due to slower retail sales and lost wages. The city was planning to increase the World Trade Center's property taxes by nearly fourfold to \$100 million upon the leasing of the building to a private partnership. In all, this tragedy could easily take a \$10 billion bite out of the metro area's \$500 billion economy.

Property damages could reach as high as \$4 billion. The WTC alone was valued at \$1.2 billion. When including the insurance on lost wages, lives and work disruptions, the estimates approach \$20 billion, well above the losses incurred as a result of Hurricane Andrew in 1992 and the Northridge earthquake in 1994.

**Relief.** Congress took only two days to propose a \$40 billion relief package, half of which is earmarked for NEY. Insurance payments will follow. Cleanup will begin soon and infrastructure in lower Manhattan will be rebuilt. Eventu-

ally, another office building will likely rise out of the ashes of the WTC. This pattern of a sharp curtailment in economic output followed by a period of strong growth is common to many events of sudden destruction.

What distinguishes this catastrophic event is the breadth and depth of the human losses. Currently, the mayor's office estimates more than 4,700 casualties, amounting to perhaps as much as one-tenth of 1% of NEY's huge job base. The negative impact of these staggering losses on NEY's economy goes beyond the sheer number. Compounding the lost lives is the tremendous loss of intellectual capital as many of the victims were highly trained professionals. The loss of these individuals could slow the recovery time for these businesses.

Longer term. Long-term challenges are increasing. NEY's high costs of doing business will climb even higher as firms increase spending on security measures. Transportation in and out of NEY will also be more inconvenient and more costly as airlines become more stringent with security. Finally, the attack on the WTC could unnerve the business community so they think twice about the safety of being in NEY.

New York's position as the world's financial capital, however, is unlikely to be lost. The concentration of highly productive human capital will continue to attract and retain businesses. Firms will spend more on security no matter where they are located, although perhaps not to the same degree as in NEY. Finally, as technology shrinks the world, there is no safe haven from a determined terrorist. Thus, while the unspeakable events that occurred on Tuesday will forever change NEY's skyline, its economy will ultimately overcome the blows it has sustained. *Celia Chen*

## **New York**

#### Securities Industry Is Crucial to New York's Income

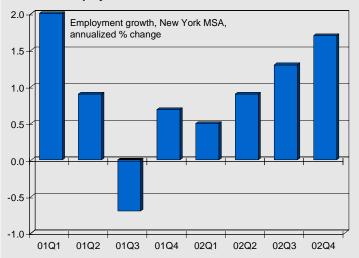

Tourism will fall sharply in the near term, as it will take time for travelers to get over their fear of flying and their hesitation to come to NEY. This will put additional pressure on Manhattan restaurants, hotels, retailers and transportation services. The loss will be made up partly by the large number of visitors who will arrive to participate in the immediate cleanup and the subsequent rebuilding effort. But this will not support high-end tourism services that support a large share of income derived from the industry. Thus, expect weak service employment growth over the coming year.

Displaced firms are already scrambling for space. Vacancy rates in Manhattan rose slightly in the second quarter, but not enough to replace the nearly 20 million square feet of space that was destroyed at the World Trade Center or damaged nearby, which accounts for approximately 5% of Manhattan's office space. Struggling dot coms are turning over their excess space to displaced firms, but the available blocks are generally small. Companies will be more successful if they search in the suburbs rather than in New York. NEY's vacancy rates will drop close to zero and suburban rates will fall substantially.

The near-term outlook is bleak. Prior to the terrorist attack, employment growth had already slowed to zero. There will be an inevitable decline in the current quarter from the horrendous loss of life in lower Manhattan and the virtual shutdown of its economy. A slight rebound will become evident in the fourth quarter, driven by government emergency funds and insurance payments that will go toward infrastructure repairs, cleanup, and refurbishing of remaining office space. The huge NEY economy will move forward slowly, assisted by new construction activity next year.
