

The U.S. Economic Outlook

Paul Edelstein US Macroeconomics Group October 2013

Where are we now...

Concept	Growth since pre- recession peak	Date of peak
Real GDP	4.6%	2007q4
Consumer Spending	6.1%	2007q4
Housing	-44.8%	2005q3
Exports	32.3%	2009q2
Imports	29.7%	2009q2
Business Equipment Spending	4.2%	2007q4
Employment	-1.4%	Jan 2008
Personal Income (real)	4.0%	2008q2
Corporate Profits (nominal)	30.7%	2007q2

...and where are we heading?

- 2013 q1-q3 highlights
 - Resilient consumers, still spending after tax increases. "Fiscal cliff" scares.
 - Survival of the federal government spending sequester
 - Weak 2012 ending point
- 2013 q4 concerns
 - Shutdowns in DC
 - Debt ceiling-driven spending limitations
 - QE tapering starts

- Improved employment, income and asset values will drive the recovery through 2014
- Renewed export growth as world economic growth mildly rebounds
- QE tapering winds up
- Affordable Care Act implementation

- Interest rates rise as the Federal Reserve's unemployment target get breeched
- The federal budget deficit will approach 3% of GDP, a sustainable share.

2013 2014 2015-16

Recovery still slow but set to pick up

Housing shortages, a result of under-building, are driving housing forward. The shortages have led to rising home prices, incentivizing builders to ramp up on starts. Higher mortgage rates will reduce demand, of course. But not by enough to keep housing starts from reaching 1.5 million in 2015.

```

Entitlements and interest make it hard to cut federal spending more than we have assumed

Government Shutdown – Causes and Consequences

- No budget in place for FY 2014.
- Without appropriated funds, certain government activities ceased on October 1 (start of FY 2014)
- Republicans demand ACA defunding as quid pro quo for spending bill.
 Democrats refuse to negotiate on this point.
- Misnomer: 60% of the federal government continues to function, but...
- Wide ranging impacts include furloughing of all non-emergency federal civilian personnel (whom would not be paid and would be forbidden to work) and shutting down of agency activities and services
- Government has "shutdown" 17 times since 1976 for a median 5 days.
 Last shut down was in late-2015 to early-2016 and lasted 21 days.

Government Shutdown – Causes and Consequences

- Impact on economic activity expected to be small and confined to Q4 provided :
 - shutdown lasts only 1-3 weeks
 - government workers receive back pay as in 1995-96.
- 770,000 federal government workers furloughed.
 - GDP impact primarily through lost government services output.
- Lost GDP amounts to \$1.6 billion per week of shutdown.
- Impact on Q4 GDP growth:
 - 1 week shutdown > subtracts 0.16 percentage points
 - 3 week shutdown > subtracts 0.48 percentage points
- Minor "multiplier effects" as long as shutdown is short and workers expect back pay.

IHS GDP Forecasts – With and Without a 3 Week Shutdown

(Quarter/Quarter Annualized % Change) 3 2.5 2 1.5 0.5 2013Q4 2014Q1

■ Without Shutdown

With Shudown

The Debt Ceiling – A Larger Calamity

- Debt limit was temporarily suspended this year until mid-May, then capped at \$16.7 trillion.
- Since then, Treasury has taken "extraordinary measures" to finance deficits approved by Congress.
 - Treasury estimates they will expire on October 17.
- At that point, Treasury will not be able to add net new debt (currently \$16.7 trillion).
 - Will have to rely on tax revenues and cash balances.
- If debt ceiling is not raised, there are no "good" options available to Treasury.
- Given the political and economic ramifications of not doing so, we believe the debt ceiling will be raised.

No debt-ceiling hike means no federal deficits

- Ultimately, federal deficits would have to be eliminated so that the Treasury doesn't to borrow to cover outlays.
- \$740 billion deficit projected for FY 2014.
- Eliminating would mean massive fiscal contraction
 - Would cut projected government outlays by 21% (4.2% of GDP).
- US economy would fall into recession
 - GDP would contract by 1.8% in 2014 just from fewer government outlays.
 - Multiplier effects would add to the decline.
 - Fed would try to offset, but would probably be unsuccessful.
- Even on an interim basis, massive spending cuts would be required.

IHS

What if Treasury "defaults?"

- Since federal government has never defaulted, can only speculate about the outcome.
- A missed or delayed debt payment would be a technical default.
- Financial market impact would be disastrous.
 - Collateral value of Treasury securities would plummet as markets add default risk to asset prices.
 - Credit markets would freeze
 - Bond yields would spike
 - Would spread to other credit sectors (corporate, muni, mortgage)
 - US sovereign debt would be downgraded
- Banks would have to mark down balance sheets, curtailing lending.
 - Fed might not take Treasuries as collateral at discount window.
- Treasury would probably put debt payments at front of the line.

But can Treasury prioritize debt payments over other obligations?

- Probably not.
- Put debt payments ahead of other obligations such as salaries, vendor/ contractor payments, Social Security benefits, Medicare reimbursements.
- According to Treasury, might not be technically feasible given their computer systems.
 - Treasury makes 100 million monthly payments.
- Could be politically treacherous.
 - Who gets paid first, a foreign bond holder or a Social Security recipient?
- Would not avoid credit downgrade
 - According to Fitch Ratings, arrears on any government obligations would be grounds for a downgrade.

The Debt Ceiling – Upcoming Cash Requirements

October 23	Social Security Benefits Payment	\$12 billion	
October 31	Interest payment on Treasury Securities	\$6 billion	
November 1	Social Security, Medicare Advantage and Medicare D, active-duty military pay, retiree pension benefits, SSI	\$67 billion	
November 13	Social Security Benefits Payment	\$12 billion	
November 15	Interest payment on Treasury Securities	\$30 billion	
* In addition to these nayments, ongoing activities will likely cost \$10 hillion per			

^{*} In addition to these payments, ongoing activities will likely cost \$10 billion per day on average. Tax remittances typically average \$7 billion per day.

Source: Congressional Budget Office

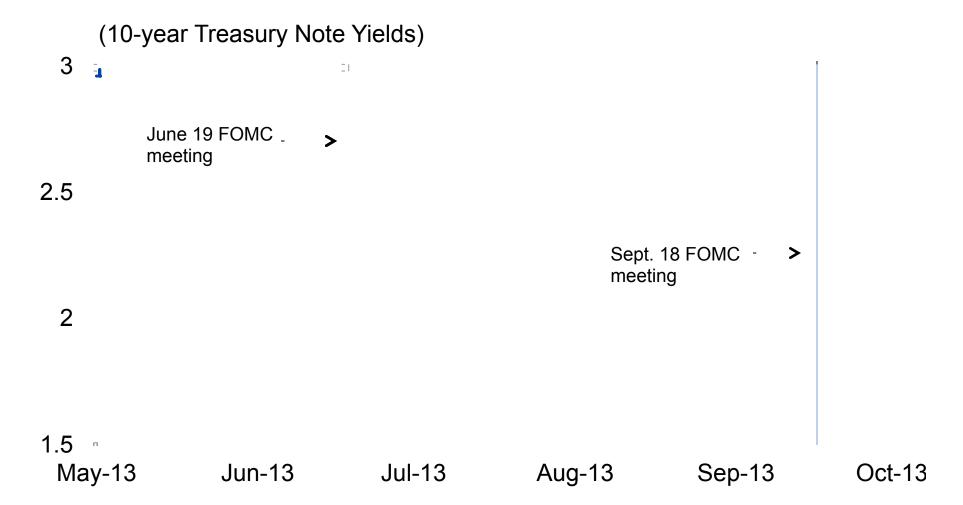

Components of monetary policy

- Current US monetary policy has three components:
 - policy rates
 - forward guidance
 - asset purchases.
- Policy rate has been at zero since December 2008.
- Two unconventional components:
 - <u>Forward guidance</u> a promise to keep the policy rate at zero at least until unemployment falls below 6.5% so long as inflation is less than 2.5%.
 - <u>Asset purchases</u> purchases of long-term US Treasuries and MBS, at \$85 billion per month pace until labor market shows substantial improvement.

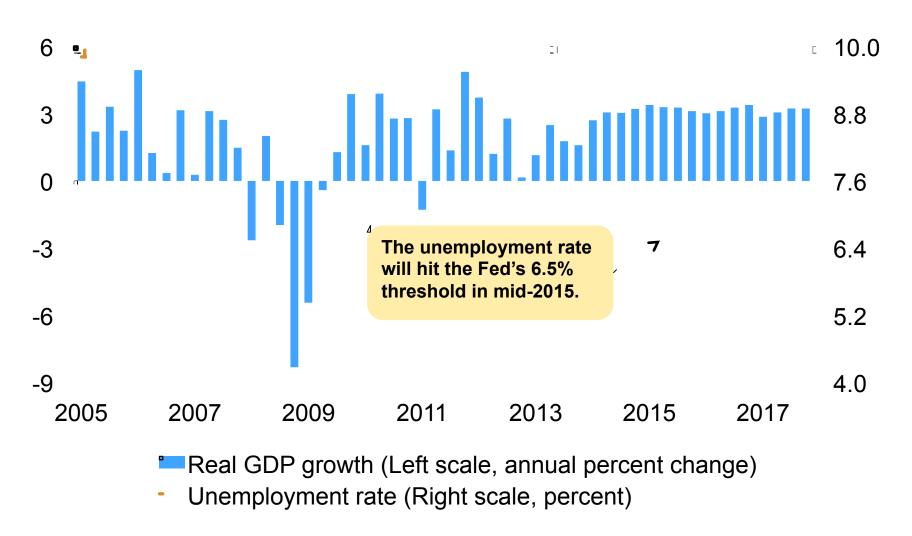

"Taper Talk" drives interest rates higher

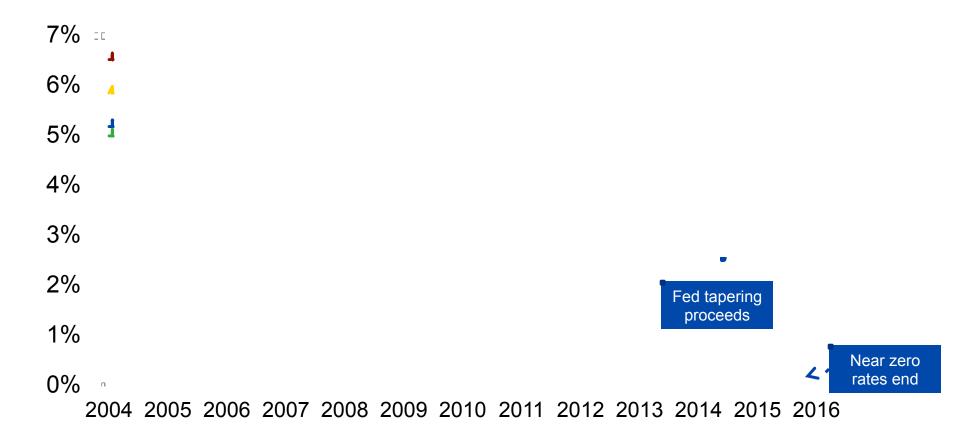

Forward Guidance: No rate hikes until unemployment hits 6.5%.

U.S. interest rate outlook – slow climb

- Federal Funds Rate 10-year Treasury Bond
- Corporate AAA Bonds 30-year fixed mortgage

Fed on hold until fog of fiscal uncertainty lifts

- Markets expected the Fed to taper at its September 18 meeting, but the Fed deferred.
 - Labor market data looking less robust
 - Impact of rising mortgage rates on housing.
 - Fiscal policy.
- Fed holds two more meetings this year (10/30 and 12/18).
 - No October taper
 - Even if CR is passed and debt ceiling raised this month.
 - December taper most likely
 - Fiscal issues resolved satisfactorily, labor market shows improvement.
 - Could wait until early next year.
